                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Scoring table:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        OM nucleic -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  on:
Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            seq length: 0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC AASO6701-AASO6757 encode for novel human protein kinases #1-57. The CC novel protein kinases have been identified as members of the tyrosine CC or serine/threonine kinase (PTK and STR) families. The polynuclectides CC encoding protein kinases and the polypeptides may be used in the CC prevention, diagnosis and treatment of diseases associated with CC inappropriate kinase expression. For example, they may be used to treat CC cancers (especially cancers of haematopoietic origin), cardiovascular CC disease (e.g. atheroselerosis), metabolic disorders (e.g. diabetes), CC immune related diseases (e.g. rheumatorid arthritis), neurological CC disorders (e.g. schizophrenia), neurodegenerative disorders (e.g. CG Parkinson's disease), inflammatory disorders (e.g. ashma), infectious CC disease (e.g. HIV) and reproductive disorders (e.g. ashma), infectious CC disease (e.g. bolynuclectides encoding protein kinases may be used as antigens in the production CC of antibodies against the protein kinases and in assays to identify CC modulators of protein kinase expression and activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotractic/chemokinetic activity, haemostatic and thrombolytic activity, cencer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           aesaye
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         C.N.S disorders.

The invention relates to human nucleic acids (AAI57798-AAI61369) and CC the encoded polypeptides (AAM32642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polypuclectides are useful CC in gene therapy. A composition containing a polypeptide or polynuclectide cC of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and CC localised neuropathies and central nervous system diseases, such as CC Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic CC lateral sclerosis, and Shy-Drager Syndrome. Other uses include the CC utilisation of the activities such as: Immune system suppression, CC Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic assays for receptor activity, cancer diagnosis and therapy, drug screening, CC assays for receptor activity, arthritis and inflammation, leukaemias and CC ute: The sequence data for this patent did not form part of the printed of the printed content of the content of the printed content of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is that of cDNA encoding novel human protein phosphatase and kinase protein PPHKP-5 (see AAR20326). The cDNA was initially identified in Incyte Clone ID No. 1271505CB1, from a foetal lung tissue library. The PPHKP-5 gene was localised to human chromosome 20. Tissues that express PPHKP-5 (as a fraction of total tissues expressing PPHKP-5) include reproductive (0.288), gastrointestinal (0.212) and haematopoietic or immune (0.192). Diseases or conditions associated with tissues expressing PPHKP-5 (as a fraction of total tissues expressing PPHKP-5) include cancer (0.577), inflammation or trauma (0.327) and cell profiferation (0.308). The encoded protein shows homology to rat kinase. The invention provides human PPHKP-1 to -11 polypeptides (see AAR2032-32) and polynucleotides (see AAR20476-86). It also provides expression vectors, host cells, antibodies, agonists and antagonists, as well as methods for disgnosing, treating or preventing disorders, associated with expression of PPHKP, including gastrointestinal disorders, immune system disorders, neurological disorders and cell proliferative disorders, including cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

CC also known as stress kinase inhibitor protein (SKIP-1)) polypeptide. The CC htrb polypeptide is useful for inhibiting an AP-1 mediated inflammatory CC signal in a cell. The polypeptide employed in the method is preferably CC htrb-1, htrb-1 C, htrb-1 N C, htrb-3, htrb-3 N cr If is also useful for providing htrb agonist activity for CC activating an ERK-mediated signal e.g. AP-1-mediated gene activation cC signal, an estrogen receptor-mediated gene activation signal, an cell. Htrb modulators are useful for modulating AP-1 mediated inflammatory signal in a cell such as tumor necrosis factor (TNP) CC induced inflammatory signal, or an interleukin induced inflammatory signal, or an interleukin induced inflammatory compounds e.g. for treating and/or preventing diseases caused by abnormal htrb activity, such as rheumatoid arthritis, disbetes, psoriasis, osteoporosis, diabetic retinopathy, myocardial infarction contents and sorteoporosis, diabetic are useful for antagential infarction and cancers. The htrb therapeutics are useful for antagential infarction contents white matter damage and subsequent cerebral palsy, and inflammation or autoimmune disorders. The present sequence represents a DNA encoding the htrb-3 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

The present sequence encodes a partial polypoptide which has k activity. The kinase polymucleotides can be used to express the polypoptides, and as probes to identify nucleic acids encoding polypoptides, and as probes to identify nucleic acids encoding proteins having kinase activity. The kinase polypoptides and

fragmented polypeptides are used as molecular weight and isoelectric focusing markers, and as controls for peptide fragmentation. They also have a number of therapeutic uses as kinases play a central role in cellular signal transduction. The polypeptides could also be used to identify binding partner proteins. The polypeptides can also be used as a reagent to identify any proteins that the polypeptide regulates, and proteins with which it might interact. The polypeptides may also be used for preparation of antibodies. The antibodies can be used in assays to detect the presence of the protein, and to purify the protein immunoaffinity chromatography.

Claim 1, Page 2352pp; English.

CC AAC77607 to AAC78448 encode the human cancer associated proteins given CC in AAB43398 to AAB4239. The proteins can have activities based on the CC tissues and cells the genes are expressed in. Example of activities CC include: cytostatic, proliferative, vulnerary; immunomodulator; cinclude: cytostatic, proliferative; vulnerary; immunomodulator; cc antidiabetic; antissthmatic; antishlergic; antibacterial; antiviral; cc antiinflammatory; antithyroid; antiallergic; antibacterial; antiviral; cc antiinflammatory; antipsoriatic; and antianglogenic. The cc mootropic; vasocropic; antipsoriatic and antianglogenic. The cc mootropic; vasocropic; antibodies can be used for preventing, treating or cc meliorating medical conditions and diagnosing pathological conditions. CC polynucleotides, polypeptides antibodies, agonists and antagonists from cc the present invention may be used to treat immune disorders by activating cr immune cells, to treat disorders, differentiation or mobilisation of cc inflammation, cancers, cardiovascular disorders, neurological disease and cr rejection, modulate haemostatic or thrombolytic activity, modulate inflammation, cancers, cardiovascular disorders, neurological disease and cc agonists and antagonists may be also be used in drug screens. AAC78449 to AAC78457 and AAB44240 represent sequences used in the exemplification of the present invention of the present sequences used in the exemplification of the present sequences used in the p

growth isolated human kinase polypeptides useful in the diagnosis, treatment and prevention of cancer, immune disorders and disorders affecting and development

Claim 5; Page 125; 126pp; English.

The invention provides human kinases (PKIN) and polynucleotides encoding PKIN. The PKIN polypeptides can be expressed using standard recombinant methodology. The PKIN polypeptides, polynucleotides, modulators and specific antibodies are useful in the diagnosis, treatment and prevention of cancer, immune disorders, disorders affecting growth and development, atherosclerosis, and other cardiovascular diseases, and lipid disorders and in the assessment of the effects of exogenous compounds on the expression of nucleic acid sequences of human kinases. The present sequence represents a cDNA encoding a human PKIN-10 polypeptide.

One hundred and twenty eight novel nucleic acid sequences, useful treating and diagnosing e.g. cancer, asthma and Alzheimer's -

Claim 1, Page 107; 290pp; English.

CC ABL39691 to ABL39818 represent novel human nucleic acid sequences CC encoding the proteins given in ABB06037 to ABB06164. The novel sequences CC (NS) can have cytostatic, osteopathic, synaecological, neuroprotective, CC vasotropic, antiarthritic, antipporiatic, ophthalmological, virucide, CC vasotropic, antiarteriosclerotic, antinfermility, cardiovascular, antifibrinolytic, hypotension, antiasthmatic, cardiant, CC annorectic, muscular, anti-HIV, antiinfertility, cardiovascular, cardiant, CC antideogram, anticonvulsant, antidabetic, tranquilliser, antiulcer, CC antideopressant, gastrointestinal, aeuroleptic, cerebroprotective, antideopressant, gastrointestinal, aeuroleptic, cerebroprotective, CC noctropic and contraceptive activities. The NS can be used in vaccines, CC gene therapy and antisanse therapy, Nucleic acids, expression vectors and CC diagnosing e.g. cancer, osteoporosis, endometriosis, degenerative and CC diagnosing e.g. cancer, osteoporosis, endometriosis, degenerative, contracter, cateronia, multiple sclerosis, inflammation, skin disorders, CC glaucoma, obesity, muscular dystrophy, AIDS, infertility, cardiovascular CC disease, coagulation disease, isohaemia, hypertension, asthma, immune CC disease, coagulation disease, isohaemia, hypertension, asthma, immune CC disease, epilepsy, angina, neurodegeneration, diabetes, anxiety, CC Alzheimer's disease and as a contraceptive.

Sequence 1076 BP; 172 A; 352 C; 346 G; 194 T, 12

```
CC ABL39691 to ABL39818 represent novel human nucleic acid sequences CC encoding the proteins given in ABB06037 to ABB06144. The novel sequences CC (NS) can have cytostatic, osteopathic, gynaecological, neuroprotective, cantirheumatic, antiarthritic, antisportatic, ophthalmological, virucide, vasotropic, antiarteriosclerotic, antisportatic, ophthalmological, virucide, canorectic, muscular, anti-HTV, antiinferrility, cardiovascular, cardiant, anticoagulant, antifibrinolytic, hypotension, antiasthmatic, cardiant, cimmunomodulator, anticonvulsant, antidabetic, tranquilliser, antiulcer, cimmunomodulator, anticonvulsant, antidabetic, tranquilliser, antiulcer, cantidepressant, gastrointestinal, acuroleptic, cerebroprotective, antidepressant, gastrointestinal, acuroleptic, cerebroprotective, concerpic and contraceptive activities. The NS can be used in vaccines, complete and antisense therapy. Nucleic acids, expression vectors and cantibodies from the present invention can be used for treating and contraceptive activities, endometriosis, degenerative diseases, dystonia, multiple sclerosis, rheumatoid arthritis, psoriasis, contenses, obesity, muscular dystrophy, AIDS, infertility, cardiovascular disease, epilepsy, angina, neurodegeneration, bein disease, anthere, contenses, schizophrenia, viral disease, gastric ulcers, anxiety, candiovascular disease, disease and as a contraceptive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                One hundred and twenty eight novel nucleic acid sequences, useful treating and diagnosing e.g. cancer, asthma and Alzheimer's -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          18-JUL-2000; 2000IL-0137345.
